MINI LATTICE

Mini lattice is made of strong durable metal and is designed to be EASILY handled, transported and installed by one person.

Panels are only 300mm wide so once on site you can carry it up ladders, cut to suit gables with minimum wastage and can EASILY be fitted into the colorbond frames or even existing framework to finish off that job and make it look sensational.

They are powder-coated over galvanised steel, so in essence you have a material which offers

double rust protection, and are 100% Aussie-Made.

Mini lattice can be used for patios, carports, gazebos, and verandahs to mention just to mention a few.

Panels are available in the following lengths:

- 1156mm
- 2350mm
