RAINWATER PRODUCTS

Looking at upgrading your downpipes and guttering, or whether you're putting together an entire roofing, guttering design, there are a lot of different styles for you to choose from.

Efficient control of water, and ensuring it all looks integrated and great is essential to have that shed, patio or extension work well and look good for years to come.

Midalia Steel is one of the biggest suppliers of guttering and down-pipes utilising products from the biggest manufacturers in Australia, assuring you of great quality and durability.

Check out the variety of gutter styles that will compliment your home or building.

We stock all the accessories for your rainwater goods too – silicone sealant, gutter clips, stop ends, downpipes, pops, flashings and so much more mmMate!!

FLASHINGS

Defective roof flashings are the most common cause of water penetration into roofs. It is essential to install a complete flashing system that intercepts, collects and discharges moisture or water back onto the roof and directed down the storm-water system.

Check out the various designs of flashings and capping:

FLASHINGS CONTINUED

Finish off your roofing and secure the job against water penetration using capping such as these. There should be one that is right for your job!

CUSTOM FLASHINGS

If you need a special shaped flashing for that tricky job, or to hide some of the structural work, Midalia Steel can easily have the perfect shaped flashing to suit your design made for you.

We will need to know:

GIRTH – The overall width of the sheet before it is bent

BENDS – The number of bends

ANGLES – The angles of the bends

BREAKS – Breaks are the little bends at the end which lock the flashing on to the other medium by pressure, usually 10mm

COLOUR – If it is a Colorbond® flashing, we will need to know what side the colour is on

LENGTH – The length of the flashing
