Purlins

Z & C Purlins are accurately roll formed from high strength zinc coated steel to provide an efficient, lightweight and economical roofing and cladding support system for framed structures.

Section sizes range from 100mm – 350mm in depth and from 1.0mm to 3.0mm in thickness. Punching can be performed during the manufacturing process if required for your application.

The full range of accessories is also available, including cleats, bolts and bridging.
